EE650

Air Velocity Sensor for HVAC Applications

The EE650 air velocity sensor is designed for accurate and reliable measurement in building automation and ventilation applications.

Innovative Design

The device employs an innovative air velocity sensing element, which operates on the thermal anemometer principle and is manufactured by E+E in state of the art thin-film technology. Due to its innovative design, the sensing element is very robust and highly insensitive to pollution, which leads to outstanding long-term performance.

User Configuration

For the EE650 with analogue output, the measuring range 0...10 / 15 / 20 m/s (0...2 000 / 3 000 / 4 000 ft/min), the output signal 4 - 20 mA or 0 - 10 V as well as the response time 1 or 4 seconds are selectable by jumpers.
The response time, the termination resistor and the bus address of the Modbus RTU version can also be easily set on the electronics board.

Installation and Adjustment

The enclosure design and the mounting flange included in the scope of supply allow for fast and easy installation.
EE650 adjustment, output scale setting and interface parameter selection can be easily performed using the free PCS10 Product Configuration Software and an optional stick.

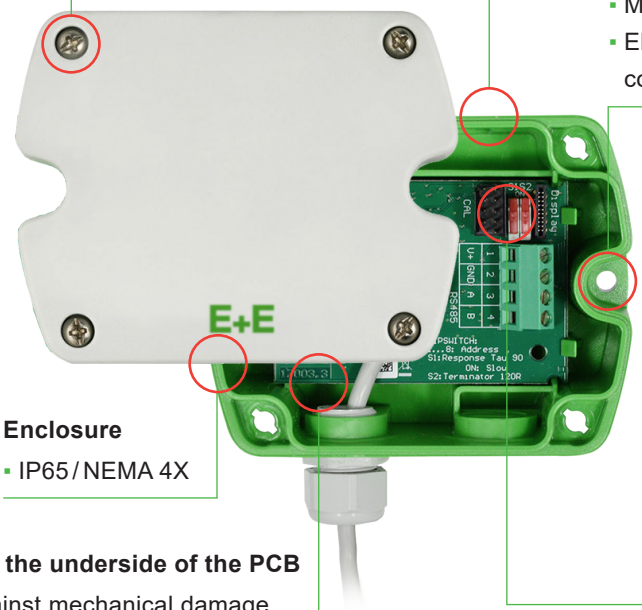
EE650 with remote probe

Features

Bayonet screws
- Open / closed with a ¼ rotation

Appropriate for US mounting requirements
- Knock-out for ½" conduit fitting

External mounting holes
- Mounting with a closed cover
- Electronics protected against construction site pollution



Enclosure
- IP65 / NEMA 4X

Electronics on the underside of the PCB
- Protection against mechanical damage during installation

Configuration and adjustment
- Measuring range
- Output signal
- Response time
- Bus address
- Termination resistor

E+E air velocity sensing element
- Exceptional mechanical stability thanks to transfer-moulding technology
- High insensitivity to pollution
- Long-term stable
- Measurement down to 0.2 m/s (40 ft/min)

Test report
according to DIN EN 10204-2.2

Features

Accredited Traceable Calibration Certificate

Internationally recognised certificates for the calibration of measuring instruments from accredited laboratories document the traceability of the measurements to the International System of Units (SI). The E+E Elektronik calibration laboratory offers two levels of traceable calibrations.

- As a Designated Institute (DI) of the Republic of Austria, the E+E calibration laboratory maintains Austria's national measurement standards for humidity, dew point temperature, air velocity and CO_2. This authorises the E+E calibration laboratory to issue calibration certificates at the level of a National Metrological Institute (NMI).
- The E+E calibration laboratory is accredited by Akkreditierung Austria in accordance with DIN EN ISO/IEC 17025 with the identification number 0608. This allows the laboratory to issue ISO 17025 certificates for the measurands humidity, temperature, dew point temperature, air velocity, flow, pressure and CO_2.

Visit www.eplusecal.com for detailed information on calibration and to enquire a certificate of accredited traceable calibration for the EE650 from the Designated Institute.

ISO 9001 Calibration Certificate

An ISO 9001 calibration certificate documents the comparative measurement of a device against high quality reference equipment (factory level standard). The comparison is performed in accordance with internal procedures that comply with ISO 9001 and provides information on the specimen's measuring accuracy. The reference equipment is traceable to national standards, however, the calibration process is not accredited. Therefore, an ISO 9001 calibration is neither traceable nor internationally comparable.

Visit www.epluse.com/iso9001cal for detailed information on calibration and to enquire an ISO 9001 calibration certificate.

Air Velocity (v)

Measuring range	0...10 m/s (0...2000 ft/min) 0...15 m/s (0...3000 ft/min) 0...20 m/s (0...4000 ft/min) (factory setting)
Accuracy[1)] from 0.2 m/s, @ 20 °C (68 °F), 45 %RH and 1 013 hPa (14.7 psi)	±(0.2 m/s (40 ft/min) + 3 % of m. v.) mv = measured value
Response time t_{90}, typ. @ constant temperature, selectable via jumpers, only for analogue output	4 s (factory setting) down to 1 s

1) The accuracy statement includes the uncertainty of the factory calibration with a coverage factor k=2 (2-times standard deviation).
The accuracy was calculated in accordance with EA-4/02 and with regard to GUM (Guide to the Expression of Uncertainty in Measurement).
